**The Corporate Eye - Elspeth H. Brown - 2008-03**
Winner, Association of American Publishers' Professional and Scholarly Publishing Award in Business, Management and Accounting In the late nineteenth century, corporate managers began to rely on photography for everything from motion studies to employee selection to advertising. This practice gave rise to many features of modern industry familiar to us today: consulting, "scientific" approaches to business practice, illustrated advertising, and the use of applied psychology. In this imaginative study, Elspeth H. Brown examines the intersection of photography as a mass technology with corporate concerns about efficiency in the Progressive period. Discussing, among others, the work of Frederick W. Taylor, Edward Tad Maybury, Frank Gilbreth, and Lewis Hine, Brown explores this intersection through a variety of examples, including racial discrimination in hiring, the problem of photographic realism, and the gendered assumptions at work in the origins of modern marketing. She concludes that the goal of understanding these various forms and applications of photographic production in that era was the increased rationalization of the modern economy through a set of interlocking managerial innovations, technologies that sought to redesign not only industrial production but the modern subject as well.

Many of those interested in the effect of industry on contemporary life are also interested in Frederick W. Taylor and his work. He was a true character, the stuff of legends, enormously influential and quintessentially American, an award-winning sportsman and mechanical tinkerer as well as a moralizing rationalist and early scientist. But he was also intensely modern, one of the long line of American social reformers exploiting the freedom to present an idiosyncratic version of American democracy, in this case one that began in the industrial workplace. Such a wide net captures an amazing range of critics and questioners as well as supporters. So much is puzzling, ambiguous, unexplained and even secret about Taylor's life that there will be plenty of scope for re-examination, re-interpretation and disagreement for years to come. But there is a surge of fresh interest and new analyses have appeared in recent years (e.g. Wrege, C. & R. Greenwood, 1991 “F. W. Taylor: The father of scientific management”, Business One Irwin, Homewood IL; Nelson, D. (Ed.) 1992 “The mental revolution: Scientific management since Taylor”, Ohio State University Press, Columbus OH). We know other books are under way. As is customary, we offer this additional volume respectfully to our academic and managerial colleagues, from whatever point of view they approach scientific management, in the hope that it will provoke fresh thought and discussion. But we have a more aggressive agenda.
