Application of the International Classification of Diseases to Neurology - World Health Organization - 1997-10-02
Gives specialists in the clinical neurosciences a detailed and authoritative instrument for coding virtually all recognized neurological conditions. Both neurological diseases and neurological manifestations of general diseases and injuries are included in this comprehensive coding tool. The volume is part of a growing family of specialty-based adaptations of ICD-10 which retain the core codes of the parent classification while providing extended detail at the fifth character and beyond. Now in its second edition ICD-NA has been revised to reflect current clinical concepts in the neurosciences as well as the new coding system introduced with ICD-10. The classification was finalized following extensive consultation with numerous professional organizations and international experts thus ensuring the representation of as many viewpoints as are practical and consistent. While remaining directly compatible with ICD-10 ICD-NA offers clinicians and researchers much greater precision allowing them to match an explicit diagnosis with a detailed code at the five- six or seven-character level. In addition a comprehensive alphabetical index and the extensive use of inclusion and exclusion terms provide considerable assistance in finding the correct category for any condition diagnosed. Apart from these opportunities for recording greater diagnostic detail the direct compatibility with ICD-10 facilitates comparisons between statistics compiled according to ICD-NA and national morbidity and mortality statistics compiled according to ICD-10. These features enhance the flexibility of ICD-NA making it suitable for use in morbidity statistics hospital record indexing and epidemiological research by government and other health agencies collecting statistical data under relatively few main headings or by individual physicians and researchers requiring a convenient tool for indexing their clinical and teaching material in sufficient detail. The revised classification should also facilitate the collection of epidemiological data comparisons of the prevalence of individual neurological diseases and identification of the risk factors for these diseases at both national and international levels. In addition to the detailed tabular list of neurological and related disorders the volume includes an explanation of the basic principles of classification and instructions for coding morphology codes for neoplasms relevant to neurology and neurosurgery and a 90-page index of diagnostic terms given in standard or official nomenclatures together with synonyms and eponyms.

Psychological Testing in the Service of Disability Determination: Institute of Medicine - 2015-06-29
The United States Social Security Administration (SSA) administers two disability programs: Social Security Disability Insurance (SSDI), for disabled individuals, and their dependent family members, who have worked and contributed to the Social Security trust funds, and Supplemental Security Income (SSI), which is a means-tested program based on income and financial assets for adults aged 65 years or older and disabled adults and children. Both programs require that claimants have a disability and meet specific medical criteria in order to qualify for benefits. SSA establishes the presence of a medically-determined impairment in individuals with mental disorders other than intellectual disability through the use of standard diagnostic criteria, which include symptoms and signs. These impairments are established largely on reports of signs and symptoms of impairment and functional limitation. Psychological Testing in the Service of Disability Determination considers the use of psychological tests in evaluating disability claims submitted to the SSA. This report critically reviews such psychological tests, including symptom validity tests, that could contribute to SSA disability determinations. The report discusses the possible uses of such tests and their contribution to disability determinations. Psychological Testing in the Service of Disability Determination discusses testing norms, qualifications for administration of tests, administration of tests, and reporting results. The recommendations of this report will help SSA improve the consistency and accuracy of disability determination in certain cases.

Emotion Regulation and Well-Being - Ivan Nykyforch - 2010-10-22

Emotion is a basic phenomenon of human functioning, most of the time having an adaptive value enhancing our
effectiveness in pursuing our goals in the broadest sense. Regulation of these emotions, however, is essential for
adapting to our changing environment. Dysfunctional emotion regulation can lead to problems in various aspects of
life, including relationships, work, and mental health. Effective emotion regulation is crucial for well-being and
success in various domains.

In Storytelling for Lawyers, Philip Meyer explains how the art of storytelling can be applied to legal practice. He
presents practical tips and strategies for crafting narratives that are persuasive, compelling, and effective in the
context of litigation. The book provides a narrative toolkit that helps attorneys construct narratives that
resonate with judges and juries.

Psychology in Human Context - Sigmund Koch - 1999-07
Sigmund Koch (1917-1996) was one of the twentieth century's most penetrating and wide-ranging critics of the scientific ambitions of psychology. Writing in a style sometimes scathing, sometimes witty, always lucid, he decreed any psychology that attempted to eradicate the human dimension by moving it closer to the humanities and arts. The broad scope of essays in Psychology in Human Context—which began as the basis for the eagerly anticipated postscript to Koch's seminal Psychology, A Study of a Science—reveals his writings to be as fresh and relevant today as ever. Carefully edited by two of Koch's close associates, this collection places psychological and philosophical issues in the context of twentieth-century thought and provides intellectual and moral signposts for future travelers in what Koch regarded as the irrevocably rich and human realm of the psychological studies. Sigmund Koch was University Professor of Psychology and Philosophy at Boston University, the editor of the landmark six-volume series Psychology: A Study of a Science (1959-1963) and coeditor of A Century of Psychology as Science. He served as the president of three divisions of the American Psychological Association and was director of the Ford Foundation program in the Humanities and the Arts (1964-1967).

Humans as Self-Constructing Living Systems - Martin E. Ford - 2019-03-04
Originally published in 1987, the purpose of this companion volume to Donald Ford's (1987) Humans as Self-Constructing Living Systems: A Developmental Perspective on Personality and Behavior was to illustrate the potential utility of the Living Systems Framework (LSF) for stimulating new theoretical advances, for guiding research on human living behavior and development, and for facilitating the work of the health and human service professions. Although not exactly a "how to" manual, it does provide many concrete examples of how and when the framework itself can help those who have read the theoretical volume refresh their memory, and assist those who have not, in understanding the basic concepts of the LSF and in deciding whether and how the framework might be useful to them.

Neurological, Psychiatric, and Developmental Disorders - Institute of Medicine - 2001-01-01
Brain disordersâ€”neurological, psychiatric, and developmentalâ€”affect at least 250 million people in the developing world, and this number is expected to rise as life expectancy increases. Yet public and private health systems in developing countries have paid relatively little attention to brain disorders. The negative attitudes, prejudice, and stigma that often surround many of these disorders have contributed to this neglect. Lacking proper diagnosis and treatment, millions of individual lives are lost to disability and death. Such conditions exact both personal and economic costs on families, communities, and nations. The report describes the causes and risk factors associated with brain disorders. It focuses on six representative brain disorders that are prevalent in developing countries: developmental disabilities, epilepsy, schizophrenia, bipolar disorder, depression, and stroke. The report makes detailed recommendations of ways to reduce the toll exacted by these six disorders. In broader strokes, the report also proposes six major strategies toward reducing the overall burden of brain disorders in the developing world.

Managing PeopleWhat's Personality Got To Do With It? - Carol Ritterberg, Ph.D. - 2007-04-01
Success in life is, of course, not totally, dependant upon our ability to manage. We manage on the job, we manage in our governmental and educational institutions, and we manage in our personal lives. Successful managers are those who understand what needs to be accomplished, who communicate with those who are supposed to get it done, and achieve a desired result through their efforts. While the focus of this book is on management interactions between people based on their personality colors in the working world, the principles and processes it presents are equally applicable in any environment or situation. What you'll learn from reading this book by best-selling author Carol Ritterberg will not only help you understand why people consistently and predictably do the things they do, but it will help you understand the challenges and limitations you must deal

Managing People: What's Personality Got To Do With It? - Carol Ritterberger, Ph.D. - 2007-04-01
Success in life is significantly, if not totally, dependent upon our ability to manage. We manage on the job, we manage in our governmental and educational institutions, and we manage in our personal lives. Successful managers are those who understand what needs to be accomplished, who communicate with those who are supposed to get it done, and achieve a desired result through their efforts. While the focus of this book is on management interactions between people based on their personality colors in the working world, the principles and processes it presents are equally applicable in any environment or situation. What you'll learn from reading this book by best-selling author Carol Ritterberger will not only help you understand why people consistently and predictably do the things they do, but it will help you understand the challenges and limitations you must deal with based on your own personality traits and characteristics. It will also show you how to utilize the knowledge and understanding of personality differences to manage, influence, and motivate your subordinates, peers, and associates successfully. Overall, it will bring color to your life as a manager.

Horizon Above and Beyond - Tharun Kurian Alex - 2016-05-12
This compilation, Horizon Above and Beyond, is the outcome of the hard efforts of past two years. Unlike other projects or approaches that attempt to pool out literature and language from each other, the following text has attempted not to catalog either the text or the contents into any particular class of subjects of concern and, thus, keeping it broad and wide. It sheds the limelight onto the research works done by the scholars of various disciplines. The technical aspect of language, such as linguistics and translation, along with literary criticism and the researches on novels, poems, short stories, films, religion, etc., are brought under a single haven, thereby extending the subjectivity of research on language and literature. Similarly, the rigidity, fluidity, and hypocrisy of the various social institutions are also put into scrutiny respectively in different areas. Therefore, instead of choosing the works that are purely literary, those tinted with the flavor of other styles and outlooks are muddied together here.

Why People Do the Things They Do - Baumann, Nicola - 2017-08-31
How can we motivate students, patients, employees, and athletes? What helps us achieve our goals, improve our well-being, and grow as human beings? These issues, which relate to motivation and volition, are familiar to everyone who faces the challenges of everyday life. This comprehensive book by leading international scholars provides integrative perspectives on motivation and volition that build on the work of German psychologist Julius Kuhl. The first part of the book examines the historical trail of the European and American research traditions of motivation and volition and their integration in Kuhl's theory of personality systems interactions (PSI). The second part of the book considers what moves people to action - how needs, goals, and motives lead people to choose a course of action (motivation). The third part of the book explores how people, once they have committed themselves to a course of action, convert their goals and intentions into action (volition). The fourth part shows what an important role personality plays in our motivation and actions. Finally, the fifth part of the book discusses how integrative theories of motivation and volition may be applied in coaching, training, psychotherapy, and education. This book is essential reading for everyone who is interested in the science of motivating people.
