The Evolution of Human Pair-Bonding, Friendship, and Sexual Attraction - Michael R. Kauth - 2020-11-30

The Evolution of Human Pair-Bonding, Friendship, and Sexual Attraction presents an evolutionary history of romantic love, male-female pair-bonding, same-sex friendship, and sexual attraction, drawing on sexuality research, gay and lesbian studies, history, literature, anthropology, and evolutionary science. Employing evolutionary theory as a framework, this book examines relationships that have evolved to increase survival, reproduction, and sexual pleasure to nurture same-sex environments for both men and women, ultimately benefiting their reproductive success and promoting the inheritance of traits for future generations. The Evolution of Human Pair-Bonding, Friendship, and Sexual Attraction is an accessible and engaging read that asks what attracts people to one another, why love has developed the way it has over time, and what makes us susceptible to jealousy and envy in relationships.
