Prospects

**Upgrading Labour Market Information in Developing Countries Problems Progress and Prospects**

This report on Estonia is the seventh country study published in a series of reports looking into how policies connect people with jobs. It discusses the set-up and performance of active labour market policies (ALMPs) in Estonia.

**Connecting People with Jobs: Improving the Provision of Active Labour Market Policies in Estonia**

OECD - 2021-03-02

This report on Estonia is the seventh country study published in a series of reports looking into how policies connect people with jobs. It discusses the set-up and performance of active labour market policies (ALMPs) in Estonia.

**Future of Jobs: Is-itroska Team**

- Times are changing and the labor markets are under immense burdens from the collective effects of various megatrends. Technological growth and greater incorporation of economies along with global supply chains have been an advantage for several workers armed with high skills and in growing occupations. However, it is a challenge for workers with low or obsolete skills in diminishing zones of employment. Business models that are digitalized have workers as self-employed instead of standard employees. People seem to be working and living longer, but they experience many job changes and the peril of skills obsolescence. Impairments in both quality of job and earnings have increased in several countries. The depth and pace of digital transformation will probably be shocking. Industrial robots have already stepped in and artificial intelligence is making its advance too.

Globalization and technological change predict the great potential for additional developments in labor market performance. But people should be ready for change. A progression of creative amelioration is probably under way, where some chores are either offloaded or given to robots. A better world of fewer jobs cannot be warranted - a lot will be contingent on the right policies and incentives in place.

**Labour Market Planning Revisited**

M. Hopkins - 2002-09-05

This book enables the reader to understand labour markets and shows how to forecast the need for skills in developing countries. The impact of the employment structure on wealth, poverty and the need for a better forecasting techniques that assessed the labour market requirements of the future were dubious and that the future lay with labour market analysis and labour market signalling. This book discusses this but acknowledges that the models of the past should be supplemented with better data and improved labour market analysis and in doing so produces its own model for analysing the needs of labour markets.

**Training Needs - Lothar Richter**

This monograph outlines a new approach to the assessment and monitoring of training needs in developing countries and gives examples of how the approach can be applied in practice. It argues that, as conventional manpower planning techniques in 1991 edition of the Report on Training Needs, do not give adequate guidance for the planning of vocational training. Rather, the techniques should be used flexibly to investigate the training needs of the branches of industry and should be supplemented by labour market signalling. The assessment and monitoring of training needs.

**Labour Market Monitoring and Employment Policy**

Martin Godfrey - 1993

Labour Market Monitoring and Employment Policy - Martin Godfrey - 1993

The book discusses whether governments really have no other choice than either occupational upgrading or full employment with expanding low-end jobs. The book throws new light on these timely questions on how to reduce on extensive forms of work instability, informality, unemployment, and poverty. It raises the question of how technology, globalization, education, migration, and institutions. The book discusses whether governments really have no other choice than either occupational upgrading with scant unemployment or full employment with expanding low-end jobs. This report, which focuses on four US states – Ohio, Texas, Virginia and Washington – is the third of a series of comparative research reviews conducted by OECD on the labour market relevance and outcomes of higher education. It provides a comprehensive review of graduate outcomes and policies supporting alignment between higher education and the labour market in the four participating states in 2018-19, an overview of the US labour market and higher education context, and a range of policy examples from across OECD jurisdictions to help improve the alignment of higher education and the labour market.

Building America's Skilled Technical Workforce - National Academies of Sciences, Engineering, and Medicine - 2016-06-04

Skillful technical occupations defined as occupations that require a high level of knowledge in a technical field and are performed by individuals who have an accreditable level of education and training in a technical domain. This report presents a framework for improving the education systems to better support this workforce and makes recommendations to strengthen the skills of youth, reduce skills imbalances, foster greater equity in access and improve the effectiveness of social transfers, labor market conditions, the effects of macroeconomic shocks on income distribution and labor market outcomes, child anthropometrics, and gender inequalities.

Indicators Module is a powerful tool for producing and analyzing KILM indicators using household survey data. This book contains the results of research from three major European institutes – the Research Centre for Education and the Labor Market (ROA) at the University of Limburg in the Netherlands, the Institute for Research Employment (IER) at the University of Warwick in the U.K., and Institut für Arbeitsmarkt- und Berufsforschung (IAB) at the Bundesanstalt für Arbeit in Germany. The book offers a comparative analysis of case studies focusing on improving skills use in the workplace across eight countries. workers, this book aims to shed light on whether it is trade or technology that is primarily responsible for this demand shift. Importantly, the studies in this book describe how globalization and technological change are interacting rather than separate forces. Topical and timely, this significant book will be a valuable read for academic researchers, analysts and professional economists in the policy making community.

Globalisation and the Labour Market - Robert Anderton - 2004-04-01
Incorporating new empirical data and using a wide variety of methods such as econometrics, general equilibrium and case studies, this detailed volume provides a thorough investigation into the causes of the deterioration in the relative economic fortunes of less-skilled workers across various countries, with a focus on the role of globalization. It reveals how in the past thirty years, the decline in the wages and employment of less-skilled workers relative to skilled workers in Europe and North America has coincided with an acceleration in 'globalization'. The latter's rapid pace is indicated by the strong growth in both world trade and foreign direct investment which, in turn, have been stimulated by various factors such as reductions in trade barriers a drastic decline in the costs of communication and transportation and the internationalization of production. Although it is now widely held that the main cause of this rise in inequality seems to be a shift in demand towards higher skilled workers, this book aims to shed light on whether it is trade or technology that is primarily responsible for this demand shift. Importantly, the studies in this book describe how globalization and technological change are interacting rather than separate forces. Topical and timely, this significant book will be a valuable read for academic researchers, analysts and professional economists in the policy making community.

Connecting People with Jobs: Key Issues for Raising Labour Market Participation in Australia - OECD - 2017-03-09
This report on Australia is the third country study published in a series of reports looking into strategies to encourage greater labour market participation of all groups in society with a special focus on the most disadvantaged.

Improving the Performance of Construction Industries for Developing Countries - Pantaleo D. Rsedamila - 2020-12-22
This book documents the experiences, development, and prospects of the construction industry in numerous developing countries. It will provide a strong base of reference for countries looking to improve their construction industries as part of their wider economic development programme. The opening chapter presents a strategic overview of the contents of the book, and each country-specific chapter is structured to consider the legal and policy frameworks, administrative infrastructure and procedures, and implementation mechanisms, as well as the experiences, current activities, and future plans and programmes with respect to construction industry development in each country. The concluding chapter looks forward and considers the implications of future trends for the construction industries in developing countries and the actions which will be required to address them. Chapters cover: India, Singapore, Chile, South Africa, Tanzania, Malaysia, Botswana, Ghana, Uganda, Indonesia, China, Croatia, and Eswatini. Readers will learn about the wealth of comparable stories from global coverage from the detailed country-specific cases. Building on important scholarly works in the field, this book is essential reading for academics, researchers, and policy makers in built environments, economics, construction management, infrastructure management, and the wider construction industry.
