Manet’s classical oil-on-canvas portrait of the young French actress and singer, Gisèle Récamier, oozes with the same old-world charm that French paintings are known for. But are the old masters really that good? Manet’s classical oil-on-canvas portrait of the young French actress and singer, Gisèle Récamier, oozes with the same old-world charm that French paintings are known for. But are the old masters really that good?

The Indian way of life is beautifully illustrated through the eyes of a little girl called Diya. Diya narrates her life at home, school, and the role in plays in our society. Important concepts like democracy, freedom, and lawmaking are explained, along with an introduction to the role the Constitution plays in our government as well as our nation’s three branches of government.

The International Encyclopedia of Philosophy is a comprehensive survey of all the major areas of philosophical inquiry. It is an accessible and readable introduction to philosophy for students and general readers alike. It is an accessible and readable introduction to philosophy for students and general readers alike.

Chess Workbook for Children

An introductory guide to Eastern and Western philosophy for kids ages 8 to 12 Philosophy is both fun and good for kids’ brains, as it encourages them to think deeply and develop their own solutions to complex problems. With this coloring book for philosophy kids, there’s been a serious and interesting introduction to important thinkers and ideas that’s far too light and easy to understand. Your child will explore questions like: “What is evil? What is the purpose of life? What do you really believe? What do you think?”

The Baby Signs® Language System teaches babies how to talk. It helps babies communicate their needs, feelings, and wants as early as birth. Babies can even learn to sign before they can talk. Parents who sign to their babies can also help their babies learn to talk more easily. Just point to a sign in the book, say the word while making the sign, and the baby will soon be signing. Communicating a wet diaper or a hungry belly, asking for help or saying “all done” becomes as easy as showing a simple hand gesture.

The Sun warms our days and brings light to the dark. Let’s find out about the Sun, and why it’s so important to life on Earth. There are many stars in the night sky, but only one that we’ve found so far that supports a planet filled with life, that’s our star, the Sun. The Sun is a star made of hot, glowing gas called plasma. The Sun’s energy is what powers the Earth’s weather and climate. It’s the reason we have day and night, and it’s the reason we can see the stars at night. The Sun is a source of energy for all of life on Earth. I Am the Sun introduces kids to the basic concepts of Space and Earth science while also teaching how important the Sun is to our very existence here on Earth. From the air we breathe to the ever-changing weather, the Sun is a source of life for all of us. Young children will learn about basic concepts of astronomy, how the sun gets its start in space, and how it’s the glue that holds the solar system together. This I Am the Sun is a great beginning science book for kids. Images are big and bright for kids ages 3-8. The concepts are basic and geared for preschool through second grade learners.
